

Manual Antenna Positioner MAP 2.5-T

Technical Data

Antenna height adjustable manually		0.3 m to 2.5 m
Total mast height		2.7 m
Load capability	max.	6 kg (when balanced)
For long and heavy antennas a counter weight is required to balancing the load		
Depending on the distance of the antenna centre of gravity		
Polarisation manually		0°/90° (vert./hor.)
Manual tilting of antenna		± 30°
Stand manually rotatable		± 30°
Material		Plastic + reinforced fibreglass
Base L x W		0.7 m x 0.7 m
Moveable with 4 casters or fixed on the turntable		
Temperature range		+10 °C...+35 °C
Total weight	approx.	30 kg

Brief description

The MAP 2.5-T manual antenna positioner is specifically designed for measurements in electromagnetic absorption chambers at a fixed measuring height. The MAP 2.5-T manual antenna positioner has no metal parts (except for the wheels).

Antenna Adapters for all commercially available antennas are available upon request. All antennas during polarisation rotate around their axis to eliminate any elevation errors. Height adjustment, tilting, rotating and polarisation change are performed manually.

Information presented enclosed is subject to change as product enhancements are made regularly. Pictures included are for illustration purposes only and do not represent all possible configurations.
